

## CLIENT SUCCESS STORY

For over 8 years, EASE Home Health Program has cared for a severe stroke victim who is bedridden with a feeding tube and catheter and cannot communicate verbally. Despite her limited mobility, she has shown improvement. However, due to her immobility, bathing and changing her bed take around an hour and a half daily. Her chronic pain makes maintaining her cleanliness, dryness, and preventing bed sores challenging.

Nonetheless, the EASE staff has refined this aspect of their daily routine, to the point where her husband, who was initially watchful, ceased supervising them after a year. Around two years ago, her husband's health deteriorated, rendering him unable to provide the level of care he used to. He's immensely grateful that EASE Home Health ensures his wife receives top-tier comprehensive care and comfort.
